How to change Classes for Primary Parent Planner on an Apple Device
From the Home page press the Students tab.
On this page you will see the name of the student. Press the arrow on the right next to the student’s name.
You will see all of the classes/events that you chose previously. To delete a class place your finger on the right of class to delete and slide it across to the left.
You will see the word delete appear as below. Press DELETE to remove that class/event.
Repeat the process for the class/event below if you wish to delete that. Place your finger on the right of the class and swipe across the device to the left. Again, press DELETE to remove the course.
Repeat this process for all courses until all classes/events that need to be removed for the year or semester are removed. Once all courses are deleted the app will look like this. To add new classes for the coming year, term or semester press ADD class.
Then select your school, classes and or other events to set up the app for the year as done on the original set up...
